Final Project

Portfolio Website

Solidifying my personal brand on the world wide web through a portfolio website.

Design Strategies

Using a dark background and an unusual one to make my website stand out and also be easy on the eyes.

Not using a lot of text to make sure that the user / recruiter doesn't get bored.

Making sure that the website is responsive, so that it looks good on all platforms.

Design Strategies

No external .HTML files in the website so it is a one scroll experience except the work section.

Having a unique presence by not using templated websites and hand coding a true website.

Design Features

I'm a lover of dynamic content so I added a landing SVG animation to add some movement into the website.

I want to learn reactJS and other Javascript libraries to make the content appear as the user scrolls.
